NEWTECH™ MEDICAL DEVICES

From Indigenous Ideas to Newtech Solutions

ClearHSG™

Hystero Salpingography Catheter

CE 0123

HIGH QUALITY MEDICAL DEVICES

Newtech Medical Devices Pvt. Ltd.

We develop, manufacture, market and support cutting edge vascular access devices and accessories to meet the clinical needs of the medical industry, particularly in the field of interventional cardiology and hemodialysis. Our company's engineering and applications expertise provides superior products whose progressive designs accommodate advances in medical device and whose quality anticipates the requirements of our professional clients and the patients they serve.

Currently one of the largest manufacturer & exporter in the field of Cardiology, Nephrology, Urology & Surgical Disposables in INDIA.

Hystero Salpingography Catheter - Introduction

This HSG catheter is designed to diagnose blockages or abnormalities in the uterine cavity and fallopian tubes, and it can be used for both hysterosalpingography (HSG) and hysterosonography.

The catheter is thin and flexible, which making it easily insertable. The soft and concentric balloon prevent catheter displacement enhancing patient comfort. The catheter is suitable for both X-ray and ultrasound imaging, as it is compatible with both contrast dyes and saline-based solutions.

ClearHSG™
Hystero Salpingography Catheter

Process of Hystero Salpingography (HSG):

Hysterosalpingography (HSG), also known as uterosalpingography, is a radiological procedure to investigate the shape of the uterine cavity and shape or patency of the fallopian tubes. In this test uterine cavity and fallopian tubes are filled with special dye and its image is captured by X-ray method. A normal result shows the filling of the uterine cavity and the bilateral filling of the fallopian tube with the contrasting medium to demonstrate tubal rupture, spillage of the material into the peritoneal cavity needs to be observed. It has vital role in treatment of infertility especially in case of fallopian tube blockage.

Features & Advantages:

- Smooth tip reduces risk of trauma upon insertion and removal of catheter.
- Stable placement sheath decreases the need of tenaculum.
- Soft, concentric balloon preventing leakage of sterile saline or water-based contrast media.
- Fixed volume syringe prevents over-inflation of the balloon.
